## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-26 and 35-68, drawn to a method and apparatus for controlling fluid flow in an apheresis system, comprising a first level alarm, pausing fluid flow, and a second-level alarm condition, classified in class 210, subclass 739.
  - II. Claim 27, drawn to a method and apparatus for controlling fluid flow in an apheresis system, comprising different procedures depending on whether the separation is complete classified in class 210, subclass 739.
  - III. Claims 28-34, drawn to a method and apparatus for controlling fluid flow in an apheresis system with a single alarm condition, classified in class 210, subclass 739.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions in Group III and Groups I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the main combination requires only one alarm condition and not a pausing of fluid flow, second

alarm condition, or different protocols depending on the status of the procedure, as required by Groups I and II. The subcombination has separate utility as simply a different algorithm for blood separation procedures such as dialysis.

3. Because these inventions are distinct for the reasons given above and the search required for Groups I and II is not required for Group III, restriction for examination purposes as indicated is proper.

4. This application contains claims directed to the following patentably distinct species of the claimed invention:

- a. Species A: Claims 35-61, drawn to a control system with a processor with first-level and second-level alarm trigger algorithms
- b. Species B: Claims 62-68, drawn to a control system with a processor claimed to have only one alarm trigger algorithm

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, Species A is held to be generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include

Art Unit: 3761

all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leslie R. Deak whose telephone number is 571-272-4943. The examiner can normally be reached on M-F 7:30-5:00, every other Friday off.
